6. The \$ICAT Ecosystem
7. Community and Governance
8. Roadmap
9. Security, Risks and Disclaimers

At a glance

IGNIX CAT (\$ICAT) is a culture-led community token on X Layer. Its identity combines internet-native cat culture, creative media, community participation, and an open on-chain environment.

1. Executive Summary

IGNIX CAT (\$ICAT) is a community-driven meme token deployed on X Layer. The project is built around a memorable cat-themed identity, represented by a minimalist cat holding a pink flame. The brand communicates energy, creativity, community, and momentum.

IGNIX CAT aims to grow through transparent token information, consistent communication, original content, community campaigns, creator participation, and responsible on-chain engagement. Its value proposition is centered on culture, recognition, and community coordination rather than guaranteed financial outcomes.

Core proposition

IGNIX CAT = identity + community + on-chain participation.

The project seeks to make \$ICAT a recognizable community asset within the X Layer ecosystem while keeping important information easy to verify.

2. Project Overview

IGNIX CAT is a culture-first token with a distinct visual identity: a simple cat character holding a pink flame. The cat represents community, curiosity, and internet culture; the flame represents energy, visibility, and collective momentum.

The token is deployed on X Layer, an EVM-compatible Layer 2 network associated with the OKX ecosystem. X Layer provides the network environment for decentralized applications and token activity. \$ICAT is an independent third-party token and is not endorsed, guaranteed, or operated by OKX or X Layer.

Category	Community-driven meme token

3. Vision and Mission

Vision

To become one of the most recognizable community-led cat brands in the X Layer ecosystem, combining strong cultural identity with transparent and accessible on-chain participation.

Mission

- Build a welcoming and active community around the IGNIX CAT identity.
- Create consistent, high-quality memes, graphics, campaigns, and social experiences.
- Make project information easy to verify through public contract data and official channels.
- Encourage responsible experimentation with community-led initiatives and creator collaborations.
- Grow sustainably through participation rather than unsupported promises.

Brand principles

Principle	Meaning
Authenticity	Keep the identity recognizable and communication straightforward.
Transparency	Publish verifiable information and distinguish facts from plans.
Creativity	Use art, memes, storytelling, and community campaigns as growth engines.
Participation	Give supporters ways to contribute beyond simply holding tokens.

4. Market Snapshot

The following figures were supplied in the project's market screenshot. They represent a point-in-time snapshot and may change continuously. They are not forecasts or guarantees.

Metric	Reported Snapshot
Price	\$0.0002818
Market Capitalization	\$281.8K
Liquidity	\$7.2K
Holders	454
Trading Volume	\$7.4K
Created	2 days

Live verification

For the latest token information, visit the official launch page:

ignix.bot/launch?token=0x93473df78414d36d98962ef60ef2e4c94650eeee

Always verify live price, liquidity, holders, volume, trading pairs, and contract details before making a transaction.

5. Token Economics and Fees

The token parameters below are based on the project information and fee screenshot supplied for this whitepaper. Live contract behavior and current values should always be verified on-chain or through the official launch interface.

Supply and trading parameters

Parameter	Configuration
Total Supply	1,000,000,000 ICAT
Buy Tax	1%
Sell Tax	1%
Bonding Curve Fee	1%
Post-Graduation LP Fee	0.3%
Tax Distribution	Creator 0% • Holders 100%
Dividend Plan	Quote-token dividends
Minimum Holding for Dividends	10,000 ICAT
Anti-Snipe Tax Curve	Not enabled
Graduation Protection	100 days • 98 days remaining at snapshot
Paid Out to Date	1.0551 wQQQx

Dividend clarification

The stated dividend plan uses quote-token dividends. Eligibility is shown as a minimum holding of 10,000 ICAT. Dividend amounts, timing, distribution mechanics, and future payouts are variable and should be verified through the official launch interface.

6. The \$ICAT Ecosystem

The \$ICAT ecosystem is designed as a set of community and on-chain layers that can expand as the project develops resources, partnerships, and contributors.

Community Layer

Telegram, X, community discussions, events, memes, and coordinated creative campaigns.

Culture Layer

The IGNIX CAT mascot, visual language, lore, user-generated content, and community traditions.

On-Chain Layer

The \$ICAT smart contract, wallet ownership, transfers, liquidity, dividends, and publicly verifiable transactions.

Creator Layer

Artist collaborations, meme creators, community designers, video editors, and campaign contributors.

Expansion Layer

Potential future tools, integrations, collectibles, games, or community utilities subject to feasibility and clear announcement.

Future features are exploratory unless explicitly announced through official channels. No unannounced integration, exchange listing, reward program, or utility should be treated as confirmed.

7. Community and Governance

IGNIX CAT is intended to be community-led in spirit. Community strength is measured not only by wallet counts, but also by participation quality, originality, consistency, and the ability to create a positive public identity.

Community participation may include:

- Creating and sharing original memes, artwork, videos, and educational content.
- Participating in social campaigns and public discussions.
- Helping newcomers understand the project and verify official information.
- Proposing community events, collaborations, and creative initiatives.
- Reporting impersonation, scams, misleading claims, and suspicious links.

Governance approach

At the current stage, governance is best understood as an open community coordination process rather than a formal legal DAO. As the project matures, the community may consider structured proposals, transparent voting, contributor roles, treasury reporting, or other mechanisms where appropriate.

Community safety standard

Official announcements should be cross-checked through verified communication channels. Never share seed phrases or private keys, and never assume that a person, link, giveaway, or contract is legitimate solely because it uses the \$ICAT name.

8. Roadmap

The roadmap below is directional. Timing and delivery depend on resources, technical feasibility, community priorities, and market conditions. Roadmap items are goals—not guarantees.

Phase 1 — Identity & Launch

- Establish the IGNIX CAT visual identity and official project channels.
- Publish the contract address, total supply, and token parameters.
- Build initial community presence and launch communications.
- Create foundational graphics, memes, and social content.

Phase 2 — Community Expansion

- Run consistent community campaigns and creative contests.
- Recruit artists, meme creators, moderators, and contributors.
- Develop a recognizable content calendar and community culture.
- Improve public documentation and scam-awareness resources.

Phase 3 — Ecosystem Presence

- Explore relevant X Layer ecosystem collaborations.
- Pursue appropriate token tracking, analytics, and discovery integrations.
- Introduce community-led events, creator activations, and digital collectibles where viable.
- Evaluate tools that improve participation and transparency.

Phase 4 — Long-Term Development

- Formalize contributor programs or governance processes if justified.
- Explore sustainable community funding and transparent reporting.
- Assess practical utilities that fit the brand and avoid unrealistic promises.
- Continue strengthening the IGNIX CAT identity across Web3.

9. Security, Risks and Disclaimers

Security is a continuous process. The project's public credibility depends on making it easy for users to distinguish official information from impersonation, speculation, and malicious links.

Contract transparency

The official contract address should remain consistent across official channels. Any migration, relaunch, or contract change should be communicated clearly and verified independently.

Operational transparency

Material announcements should identify whether an item is live, under development, exploratory, or dependent on third-party approval.

Market risk

Digital assets are highly volatile and may lose some or all of their value. Low liquidity, market manipulation, smart-contract vulnerabilities, and third-party platform failures may result in significant losses.

Dividend risk

Dividend mechanisms depend on the underlying platform, trading activity, distribution rules, and available quote-token revenue. Dividends are not guaranteed.

No guaranteed outcomes

Community participation does not create a promise of financial return. Exchange availability, liquidity, adoption, and future utility are uncertain.

Independent project status

IGNIX CAT is an independent third-party project. Mention of X Layer or OKX does not imply endorsement, partnership, sponsorship, approval, or responsibility for \$ICAT.

Nothing in this whitepaper is an offer, solicitation, recommendation, or promise to buy, sell, hold, or invest in \$ICAT. Users are responsible for conducting their own research and complying with applicable laws.
